[ITC Second Workshop, March 12-13, 2012, Maryland](#)

[ITC2 Invitation Letter](#)

The ITC White Paper presents the Consortium's opinion on which transporters are clinically important in drug absorption and disposition, which in vitro methods are suitable for studying drug interactions with these transporters, what criteria should trigger follow-up clinical studies, and which clinical studies should be conducted if needed. In addition, the article provides the recommendations of the Consortium on these issues, and presents decision trees that are intended to help guide clinical studies on the currently recognized most important drug transporter interactions.

The Consortium would like to hear your feedback on the recommendations presented in the White Paper. Please [click here](#) to e-mail us.
